

Commercial Motor Vehicle Collision Investigation Course for the Reconstructionist

This course will deal with the specialized investigation and reconstruction of commercial motor vehicle collisions. The course will include extensive classroom and “hands on” training when dealing with these types of collisions especially in the areas of braking, momentum, inspections, and Engine Control Modules. A day trip to the Bendix ABS plant in Bowling Green, KY will also take place during the week. This class should only be attended by trained reconstructionist. There are no class fees associated with this training. Further details provided upon registration with POC.

Course date: August 12-16

Location: Frankfort, KY
